

## Integrated Curriculum

It is an obligation on the part of schools to work upon subject matter delineations and fragmentations of syllabus to be covered in a rigid time frame. There is a conscious effort from our side to integrate different subjects to conceive an idea very similar to real life situations. Combining different ideas and concepts from varied academic disciplines makes the content more interesting and promotes independent thinking. Annual Pedagogical plan is designed by blending different disciplines like 21<sup>st</sup> century skills, Art and Sports integration, cross-curricular activities and assessments. Super-integration of subjects is also carried out to ensure hands on experience and turn academic journey into real life experience. It promotes discussion-based learning and hands -on activities, and embeds innovative approaches to learning across all subjects. All the domains of student's personality like academic, emotional, social, personal and intellectual are targeted to ensure holistic development of children.
